

Abstract

A bassinet having an accommodating space is provided. The bassinet can be supported on a baby play yard and has an accommodating portion. The accommodating portion is connected to the underneath of the bassinet and configured to define an accommodating space for receiving articles. A side face of the baby play yard is provided with an opening, so that it is convenient for a user to take out the articles received in the accommodating space. As a result, when necessary, the user just squats down, opens the opening on the side face, and thus can take out the articles very easily.
